Aaditya Srinivasan

Staff Site Reliability / Platform Engineer | Infrastructure Security and Automation

sol.job@pm.me Vancouver, Canada linkedin.com/in/asriniva

US$200K+ in combined annual infrastructure cost savings through shared network services, centralized DNS and a zero-downtime firewall migration. Staff-level SRE and platform engineer with 9+ years supporting customer-facing systems, leading production incident recovery and multi-account AWS infrastructure. Led a distributed SRE team across Vancouver and Singapore.

TECHNICAL SKILLS

Cloud & IaC — AWS | Azure | Terraform | Terragrunt | Cloudformation
Systems & Scripting — Linux | Windows Server | Python | Shell | SQL
Platforms & Delivery — Docker | Kubernetes (EKS) | ECS | Puppet | Jenkins | Bitbucket
Developer Tools — Artifactory | Codex | Confluence | Jira
Observability — Prometheus | Grafana | Splunk | CloudWatch | PagerDuty
Networking & Data — VPC | Transit Gateway | Route 53 | Cloudflare | Nginx | PostgreSQL | Cassandra
Security — IAM | KMS | HashiCorp Vault | Palo Alto | AWS Network Firewall | Suricata

PROFESSIONAL EXPERIENCE

Lululemon Athletica
Jul 2026 – Present | Vancouver, BC

Senior Platform Engineer (Contract)
Jul 2026 – Present

- **Led incident recovery for Terraform automation failures** during credential rotation, coordinating root-cause analysis and remediation with token expiry alerting and Vault managed secrets.
- **Built Codex skills** that reduced recurring support toil from dev teams by answering repeated support questions using Confluence, Jira, Gitlab and Terraform data, helping our team focus on project work.
- **Restored Terraform automation** by repairing shared version-control authentication and centralizing read-only service access, avoiding separate repository level changes.
- **Restricted access to Terraform state** by removing broad read permissions and defining explicit, least-privilege workspace access through infrastructure as code.
- **Developed reusable AWS modules for terraform** for IAM, ACM and Secrets manager and supported infrastructure-as-code adoption across engineering teams.

Voluntary Career Break
Nov 2025 – Jun 2026

Visier Inc.
Sep 2018 – Oct 2025 | Vancouver, BC

Staff Site Reliability Engineer
Aug 2024 – Oct 2025

- **Led a six-person SRE team across Vancouver and Singapore**, coordinating quarterly planning, prioritizing projects and support issues, and unblocking engineers.
- **Restored EKS and Kafka services during a DNS-related outage** and introduced Terraform-managed Route 53 change controls requiring code review.
- **Restored a production RDS database** in us-east-1 impacting 70% of customers using snapshot recovery and controlled emergency changes.

- **Saved approximately US$67,000 annually** by leading a zero-downtime migration from Palo Alto to AWS Network Firewall across five regions and authoring Suricata rules.
- **Remediated 25+ critical and high CVEs across 100+ hosts**, meeting 24-hour critical and 48-hour high-severity SLAs; coordinated Ubuntu upgrades and approved upgrade procedures.
- **Supported a successful production migration of JFrog Artifactory** from EC2 to highly available ECS with ALB and Nginx through technical oversight, design and threat-model review.
- Enabled initial cloud-service onboarding by partnering with the Azure team on AWS-to-Azure network connectivity using site-to-site VPN and Transit Gateways, Cassandra operations and Jenkins CI/CD aligned with SRE standards.

Senior Site Reliability Engineer Sep 2022 – Aug 2024

- **Saved approximately US$36,000 annually** by centralizing Route 53 resolver configuration for shared DNS across AWS accounts and Azure subscriptions.
- **Centralized Palo Alto firewalls in a network hub** using Terraform and Vault, simplifying management and updates; replaced BGP-based routing with internal ENI routing.
- **Authored operational runbooks for on-call scenarios** and network account procedures, which sped up onboarding and incident response.
- Contributed migration architecture and data transfer for a Splunk 7-to-9 migration, including moving 16TB of data from EBS to S3 with zero downtime and no loss of data.

Site Reliability Engineer II Jan 2021 – Sep 2022

- **Saved approximately US$108,000 annually** by establishing a centralized network hub account with shared VPC endpoints and transit gateway connectivity between 14 AWS accounts and security hardening with dedicated route table per account.
- **Reduced risk items in Orca scan reports by 92%** through AWS key/secret rotation, S3 bucket policies, KMS configuration and IAM role/policy hardening.

Site Reliability Engineer I Mar 2020 – Jan 2021

- **Dedicated SRE for Data Science:** provisioned AWS accounts and built HA, immutable infrastructure using Terraform (CloudFormation, ECS, EKS, ELB, SageMaker, Glue, Athena), with secure cross-account connectivity over Transit Gateway and one-way S3 replication to prevent data exfiltration.

Site Reliability Engineer Intern Sep 2018 – May 2019

- **Built self-service AWS provisioning and company-wide Jenkins CI/CD** with autoscaled workers and a TeamCity-to-Jenkins migration; managed 100+ Linux servers and used Splunk for monitoring and alerting across OS, network and data-layer issues.

Accenture Inc. Jul 2014 – Jul 2017 | Bangalore, India

DevOps Analyst Jul 2014 – Jul 2017

- **Managed Windows build servers on AWS and Jenkins CI/CD**, including disk/network maintenance, upgrades and toolchain installations.

EDUCATION

Master of Engineering in Engineering Science, *Simon Fraser University* Aug 2019 | Canada
Bachelor of Engineering in Electronics and Communication, *Anna University* May 2014 | India
